

SERVICE PRO® BEAM BLADES

DESCRIPTION: Beam Technology is the latest trend for most new wiper blade applications rapidly growing in popularity and is now found on many new popular vehicles. **SERVICE PRO® Beam Blades** provide the most comprehensive coverage that meets or exceeds the specifications of SAE J903C. The concept revolves around a spring steel “beam” inside a thermoplastic covering. This beam takes the place of the “frame” used in most wipers and gives the rubber rigidity while distributing pressure equally along the length of the wiping surface. **SERVICE PRO® Beam Blades’** consistent, uniform pressure keeps the wiper in full contact with the windshield glass at all speeds. For performance consistent with manufacturer design, replace **SERVICE PRO® Beam Blades** with vehicles originally equipped with beam blades.

- FEATURES:**
- Aerodynamic spoiler designed for smoother wipe and reduced wind lift
 - Multi-fit connector technology for quick, easy installation
 - Molded natural rubber squeegee resists wear caused by weather conditions, sun and other elements
 - Molded rubber body with precision inner steel structure provides excellent windshield contact
